DFMA - Software for Design for Manufacturability & Assemblability

Objectives

The goal is to help companies stimulate the creativity, innovation, and teamwork necessary for the development of world-class products by imparting systematic training in the DFMA software.

Boothroyd Dewhurst DFMA software tools allow companies to develop products with fewer parts at lower cost and with higher quality than was previously possible. Its disciplined approach to product development provides an early and accurate understanding of product cost and the capability to manage cost during the product development process. Finally it puts manufacturing information in the hands of design teams.

Industries all over the world have been using DFMA software tools since 1983. Our aim is to train our clients for competitive advantage in their marketplace, and they understand the importance of creating products that are simple in structure, low in cost, and high in quality.
