

Volume 11

Failure Analysis and Prevention

1. Engineering Aspects of Failure and Prevention

Introduction to Failure Analysis and Prevention
Materials Selection for Failure Prevention
Design Review for Failure Analysis and Prevention
Failure Modes and Effects Analysis
Reliability-Centered Maintenance
Products Liability and Design

2. Manufacturing Aspects of Failure and Prevention

Failures Related to Metalworking
Failures Related to Casting
Failures Related to Welding
Failures Related to Heat Treating Operations

3. Structural Life Assessment Methods

Failure Analysis and Life Assessment of Structural Components and Equipment
Failure Assessment Diagrams
Analysis Methods for Probabilistic Life Assessment
Nondestructive Evaluation and Life Assessment
Fatigue-Life Assessment
Elevated-Temperature Life Assessment for Turbine Components, Piping, and Tubing

4. Principles and Practice of Failure Analysis

The Failure Analysis Process: An Overview
Organization of a Failure Investigation
Conducting a Failure Examination
Determination and Classification of Damage
Examination of Damage and Material Evaluation
Modeling and Accident Reconstruction
Finite Element Modeling in Failure Analysis

5. Tools and Techniques in Failure Analysis

Practices in Failure Analysis

Photography in Failure Analysis

Chemical Analysis of Metals in Failure Analysis

Characterization of Plastics in Failure Analysis

Stress Analysis and Fracture Mechanics

X-Ray Diffraction Residual Stress Measurement in Failure Analysis

Metallographic Techniques in Failure Analysis

Scanning Electron Microscopy

Chemical Characterization of Surfaces

Quantitative Fractography

6. Fracture

Fracture Appearance and Mechanisms of Deformation and Fracture

Mechanisms and Appearances of Ductile and Brittle Fracture in Metals

Fatigue Fracture Appearances

Intergranular Fracture

Fracture of Plastics

Fracture Modes and Appearances in Ceramics

Overload Failures

Fatigue Failures

Creep and Stress Rupture Failures

Thermomechanical Fatigue: Mechanisms and Practical Life Analysis

7. Corrosion-Related Failures

Analysis and Prevention of Corrosion-Related Failures

Forms of Corrosion

Effect of Environment on the Performance of Plastics

Corrosion Failures of Industrial Refractories and Technical Ceramics

Hydrogen Damage and Embrittlement

Stress-Corrosion Cracking

Liquid Metal and Solid Metal Induced Embrittlement

High-Temperature Corrosion-Related Failures

Biological Corrosion Failures

8. Wear Failures

Fundamentals of Wear Failures

Abrasive Wear Failures

Fretting Wear Failures

Rolling Contact Fatigue

Rolling-Contact Fatigue of Ceramics
Impact Wear Failures
Spalling from Impact Events
Corrosive Wear Failures
Erosive Wear Failures
Cavitation Erosion
Liquid-Impact Erosion
Wear Failures of Plastics
Wear Failures of Reinforced Polymers

9. Distortion

Analysis of Distortion and Deformation

10. Failures of Manufactured Components and Assemblies

Failures of Shafts
Failures of Sliding Bearings
Failures of Rolling-Element Bearings
Failures of Lifting Equipment
Failures of Mechanical Fasteners
Failures of Springs
Failures of Tools and Dies
Failures of Gears
Failures of Boilers and Related Equipment
Failures of Heat Exchangers
Failures of Pressure Vessels
Failures of Metallic Orthopedic Implants
Failures of Pipelines
Failures of Bridge Components
Failures of Locomotive Axles
