

Volume 13

# **Corrosion: Fundamentals, Testing, and Protection**

## **1. Fundamentals of Corrosion**

Introduction to the Fundamentals of Corrosion  
Introduction to Fundamentals of Corrosion Thermodynamics  
Electrode Processes  
Electrode Potentials  
Potential Measurements with Reference Electrodes  
Potential versus pH (Pourbaix) Diagrams  
Molten Salt Corrosion Thermodynamics  
Geochemical Modeling  
Kinetics of Aqueous Corrosion  
Aqueous Corrosion Reaction Mechanisms  
Passivity  
Methods for Determining Aqueous Corrosion Reaction Rates  
Introduction to Fundamentals of Corrosion in Gases  
Thermodynamics of Gaseous Corrosion  
Kinetics of Gaseous Corrosion Processes  
Gaseous Corrosion Mechanisms  
Methods for Measuring Gaseous Corrosion Rates  
Corrosion by Molten Salts  
Corrosion by Molten Nitrates, Nitrites, and Fluorides  
Corrosion by Liquid Metals  
Introduction to Corrosion for Constructive Purposes  
Electropolishing  
Electrochemical Machining  
Electrochemical Allied Processes  
Electrochemical Hybrid Processes  
Electrochemical Refining  
Chemical-Mechanical Planarization for Semiconductors  
Anodes for Batteries  
Fuel Cells

## **2. Forms of Corrosion**

Introduction to Forms of Corrosion

Aqueous Corrosion

Atmospheric Corrosion

Galvanic Corrosion

Stray-Current Corrosion

Molten Salt Corrosion

Liquid Metal Corrosion

High-Temperature Gaseous Corrosion

Pitting Corrosion

Crevice Corrosion

Filiform Corrosion

Introduction to Metallurgically Influenced Corrosion

Effects of Metallurgical Variables on Aqueous Corrosion

Effects of Metallurgical Variables on the Corrosion of Stainless Steels

Effects of Metallurgical Variables on the Corrosion of Aluminum

Alloys

Effects of Metallurgical Variables on the Corrosion of High-Nickel

Alloys

Effects of Metallurgical Variables on Dealloying Corrosion

Corrosion of Carbon Steel Weldments

Corrosion of Stainless Steel Weldments

Corrosion of Nonferrous Alloy Weldments

Forms of Mechanically Assisted Degradation

Aqueous Corrosion-Wear Interactions

Gaseous Corrosion-Wear Interactions

Introduction to Environmentally Induced Cracking

Stress-Corrosion Cracking

Hydrogen Damage

Liquid Metal Induced Embrittlement

Solid Metal Induced Embrittlement

Microbiologically Influenced Corrosion

## **3. Corrosion Testing and Evaluation**

Introduction to Corrosion Testing and Evaluation

Designing, Planning, and Preparing Corrosion Tests

Statistical Interpretation of Corrosion Test Results

Modeling Corrosion Processes

Electrochemical Methods of Corrosion Testing

Immersion Testing

Cabinet Testing  
Microbiologically Influenced Corrosion Testing  
Simulated Service Testing in the Atmosphere  
Simulated Service Testing in Water  
Simulated Service Testing in Soil  
In-Service Techniques—Damage Detection and Monitoring  
Electrochemical Techniques for In-Service Corrosion Monitoring  
Corrosion Monitoring Techniques  
Monitoring of Localized Corrosion  
Infrared Imaging for Corrosion, Disbondments, and Cracks  
Corrosion Monitoring Using Microwave and Guided Wave  
Nondestructive Evaluation  
Corrosion Monitoring for Industrial Processes  
Evaluating Uniform Corrosion  
Evaluating Pitting Corrosion  
Evaluating Crevice Corrosion  
Evaluating Galvanic Corrosion  
Evaluating Intergranular Corrosion  
Evaluating Exfoliation Corrosion  
Evaluating Stress-Corrosion Cracking  
Evaluating Hydrogen Embrittlement  
Evaluating Corrosion Fatigue  
Evaluating Erosion Corrosion, Cavitation, and Impingement  
Evaluating Microbiologically Influenced Corrosion  
High-Temperature Gaseous Corrosion Testing

#### **4. Methods of Corrosion Protection**

Introduction to Methods of Corrosion Protection  
Introduction to Corrosion Resistance of Bulk Materials  
Corrosion Resistance of Aluminum Alloys  
Corrosion Resistance of Magnesium Alloys  
Corrosion Resistance of Stainless Steels and Nickel Alloys  
Corrosion Resistance of Titanium Alloys  
Phosphate Conversion Coatings  
Chromate and Chromate-Free Conversion Coatings  
Aluminum Anodizing  
Surface Modification Using Energy Beams  
Porcelain Enamels  
Chemical-Setting Ceramic Linings  
CVD and PVD Coatings

Pack Cementation Coatings  
Electroplated Coatings  
Continuous Hot Dip Coatings  
Batch Process Hot Dip Galvanizing  
Thermal Spray Coatings  
Introduction to Coatings and Linings  
Organic Coatings and Linings  
Zinc-Rich Coatings  
Paint Systems  
Rubber Coatings and Linings  
Anodic Protection  
Cathodic Protection  
Vapor Phase Corrosion Inhibitors  
Corrosion Inhibitors for Oil and Gas Production  
Corrosion Inhibitors for Crude Oil Refineries  
Corrosion Inhibitors in the Water Treatment Industry

## **5. Designing for Corrosion Control and Prevention**

Materials Selection for Corrosion Control  
Designing to Minimize Corrosion  
Corrosion Economic Calculations  
Predictive Modeling of Structure Service Life  
Direct Costs of Corrosion in the United States

## **6. Tools for the Corrosionist**

Introduction to Tools for the Corrosionist  
Statistics for the Corrosionist  
Materials Basics for the Corrosionist  
Applications of Modern Analytical Instruments in Corrosion  
Information Sources and Databases for the Corrosionist  
Conventions and Definitions in Corrosion and Oxidation
